Lekhya AI

ACCOUNTING ERP

GST-compliant, double-entry books that update themselves.

An accounting ERP for Indian businesses, accountants and CAs. Invoices from Seedha Bill and entries from Samvaad arrive in a review queue; a person approves them; the ledger, GST reports and bank reconciliation follow.

DOUBLE-ENTRY · GST RETURNS · AI PROPOSES, YOU APPROVE · TALLY IMPORT

Who Lekhya AI is for

An honest fit check for the three professions this catalogue covers. "Not designed for" is a real answer: it saves you a trial.

Accountants	●●●● **Built for**	Lekhya Standard serves businesses doing their own accounts, and the same ledger serves the accountant who keeps their books.
Freelancers	●●●○ **Works well**	Lekhya's own pages say "from solo consultants to CA firms". If you only need invoices, Seedha Bill alone is enough; Lekhya adds real books and a place for your accountant to work.
Chartered Accountants	●●●○ **Works well**	Lekhya keeps a client's books. For the practice itself (UDIN register, audit forms, DSC tracking, compliance calendar, many clients under one login) use Lekhya Pramaan.

How to use this PDF · every contents line, flowchart step and cross-reference is a link. The bookmarks panel of your PDF reader lists every page.

OVERVIEW

The books, kept properly

Lekhya (“writing”, in Sanskrit) keeps your books: a chart of accounts, a double-entry journal that refuses unbalanced entries, GST reports and bank reconciliation, in plain language.

Every transaction posts as **balanced debit and credit entries**. Posted journals are immutable: a mistake is corrected by a **reversing entry**, which keeps the audit trail clean. Reports (P&L, balance sheet, trial balance and more) are generated from the live ledger and export to PDF.

Documents get in through doors a person controls: **Seedha Bill invoices**, **Samvaad entries**, **AI-read invoice photos** and **Tally imports**. The AI layer **proposes and a person approves**. It never writes to the ledger directly.

In one line

Accounting that takes invoices in, checks them, and waits for a person to say yes.

BEST FIT

- Businesses doing their own accounts
- Accountants keeping several clients’ books
- Anyone moving from Tally who wants GST reports built in

The six things it does

01
Double-entry, enforced
Debit must equal credit before anything is written. Posted journals cannot be edited.

02
GST built in
CGST/SGST or IGST, HSN/SAC master, GSTR-1, GSTR-3B and GSTR-2B reconciliation.

03
AI proposes, you approve
Invoice reading, plain-language queries and account suggestions, each for you to accept or reject.

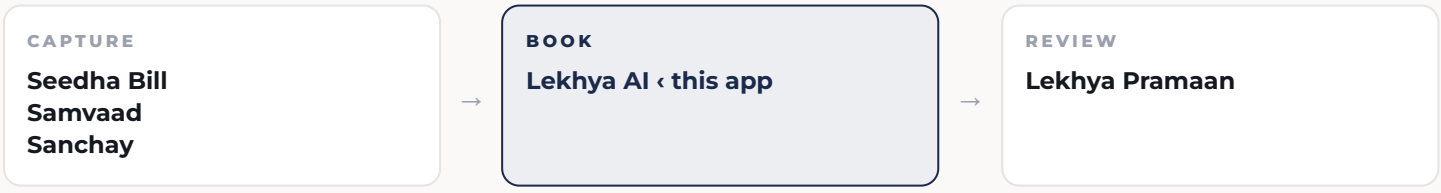

04
Seedha Bill connector
Invoices queue for review, then post as sales plus GST output.

05
Bank reconciliation
Import a statement, auto-match to the ledger, review what is left.

06
Roles and audit trail
Owner, Accountant and Viewer roles. Every change logged: who, what, when.

Where it sits in the Prabhas SaaS suite

Seedha Bill, Samvaad and Sanchay capture the transaction. Lekhya books it. Lekhya Pramaan adds the CA practice layer on top.

Sources · Lekhya README; Lekhya Features page; prabhassaas.in app registry.

CAPABILITIES

Accounting core

The ledger that everything else feeds.

01 **Chart of accounts, ready on day one**
A standard Indian GST chart is pre-loaded. Customise account heads, add sub-accounts and set opening balances.

02 **Double-entry journal engine**
Every transaction posts balanced debit and credit entries. The engine **rejects any unbalanced entry** before it touches the ledger. Posted journals are immutable; corrections go through reversing entries.

03 **GST sales invoices**
Raise sales invoices with CGST/SGST (same state) or IGST (inter-state) calculated for you, with PDF generation. Save a draft while you edit; “Post to Ledger” locks the invoice and creates the entries.

04 **Purchases and expenses**
Log vendor bills and direct expenses with GST input credit captured on each line.

05 **Reports**
Profit and loss, balance sheet and trial balance, plus day book, sales and purchase registers, a GST summary, party statements and receivable and payable ageing, all generated from the live ledger. Export a report to PDF or send it by email.

06 **Parties, ageing and fiscal years**
A ledger for every customer and vendor, receivable and payable ageing, and several financial years under one account.

07 **Tally import**
Upload your Tally XML export. Ledgers, parties and all voucher types (sales, purchase, receipt, payment, journal, contra) are imported through the migration wizard.

Sources · Lekhya Features page (Accounting Core); Lekhya README (architecture principles); Lekhya Getting Started help.

CAPABILITIES

GST and compliance

Returns and documents prepared from the same ledger. Anything that talks to the GST system goes through a GST service provider (GSP) you connect.

01 GSTR-1
Outward supplies return populated from your sales invoices: B2B, B2C and the HSN summary.
ERP PRO LISTS GST E-FILING

02 GSTR-3B
Monthly summary with tax payable computed from your sales and purchase data.
ERP PRO LISTS GST E-FILING

03 GSTR-2B reconciliation
Import GSTR-2B and reconcile it against your purchase register.

04 E-invoice (IRN)
Prepare and generate an IRN through your chosen GSP.
ERP PRO · NEEDS A CONNECTED GSP

05 E-way bill
Generate an e-way bill for goods movement, filled from the invoice.
ERP PRO · NEEDS A CONNECTED GSP

06 GSTIN validation
Check a GSTIN before you raise an invoice. The state code is detected automatically.

07 HSN / SAC master
HSN and SAC codes pre-loaded with GST rates.

Sources · Lekhya Features page (GST Compliance); Lekhya README (GST via gateway); prabhassaas.in/pricing (ERP Pro).

CAPABILITIES

AI, banking and control

AI never writes to your ledger. It proposes; you review; you approve.

01 Invoice reading (OCR)
Upload a PDF or photo of an invoice. The AI fills in vendor, date, items, GST and amount; you verify and post.
ERP PRO

02 Plain-language questions
Ask a question about your books in plain words. Lekhya turns it into one of a set of pre-defined, safe queries and runs that. An in-app assistant also answers how-to questions about the screen you are on.

03 Account suggestions
Describe a transaction and get a suggested ledger account, for you to accept or change.

04 Bank reconciliation
Import a bank statement as a CSV file, match its transactions to ledger entries, and complete the reconciliation.
IN ERP LITE AND ABOVE

05 Roles and permissions
Invite team members as Owner, Accountant or Viewer.

06 Immutable audit trail
Every change is logged: who did what and when. Posted journals cannot be edited.

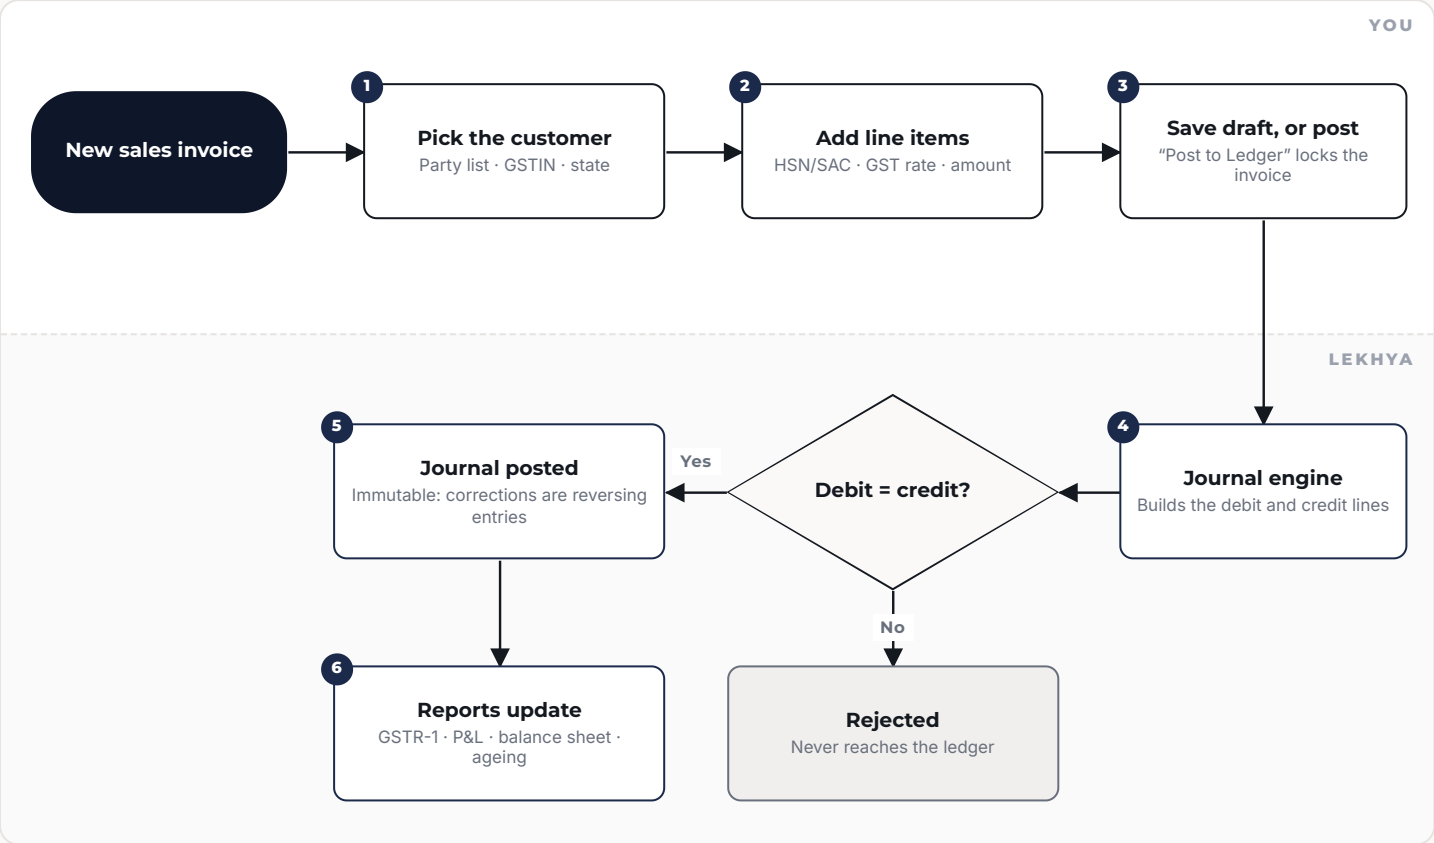

07 Companies kept apart; one sign-in
Each company's records are isolated and every page, report and download is limited to the company you are signed in to. One Prabhas account signs you in across apps.

Sources · Lekhya Features page (AI Tools, Banking, Security); Lekhya README; prabhassaas.in/pricing.

FUNCTIONAL FLOWCHART

From invoice to ledger to reports

The ledger accepts nothing that does not balance, and nothing it has posted can be edited.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Steps that are links jump to the capability behind them.

What a ₹10,000 sale at 18% looks like in the books

From Lekhya's own worked example. Revenue excludes GST: the tax collected is a liability owed to the government.

ACCOUNT	DEBIT	CREDIT	WHY
Accounts receivable	₹11,800		The customer owes this
Sales revenue		₹10,000	Revenue earned
CGST output payable		₹900	GST collected for the government
SGST output payable		₹900	GST collected for the government
Total	₹11,800	₹11,800	Balanced

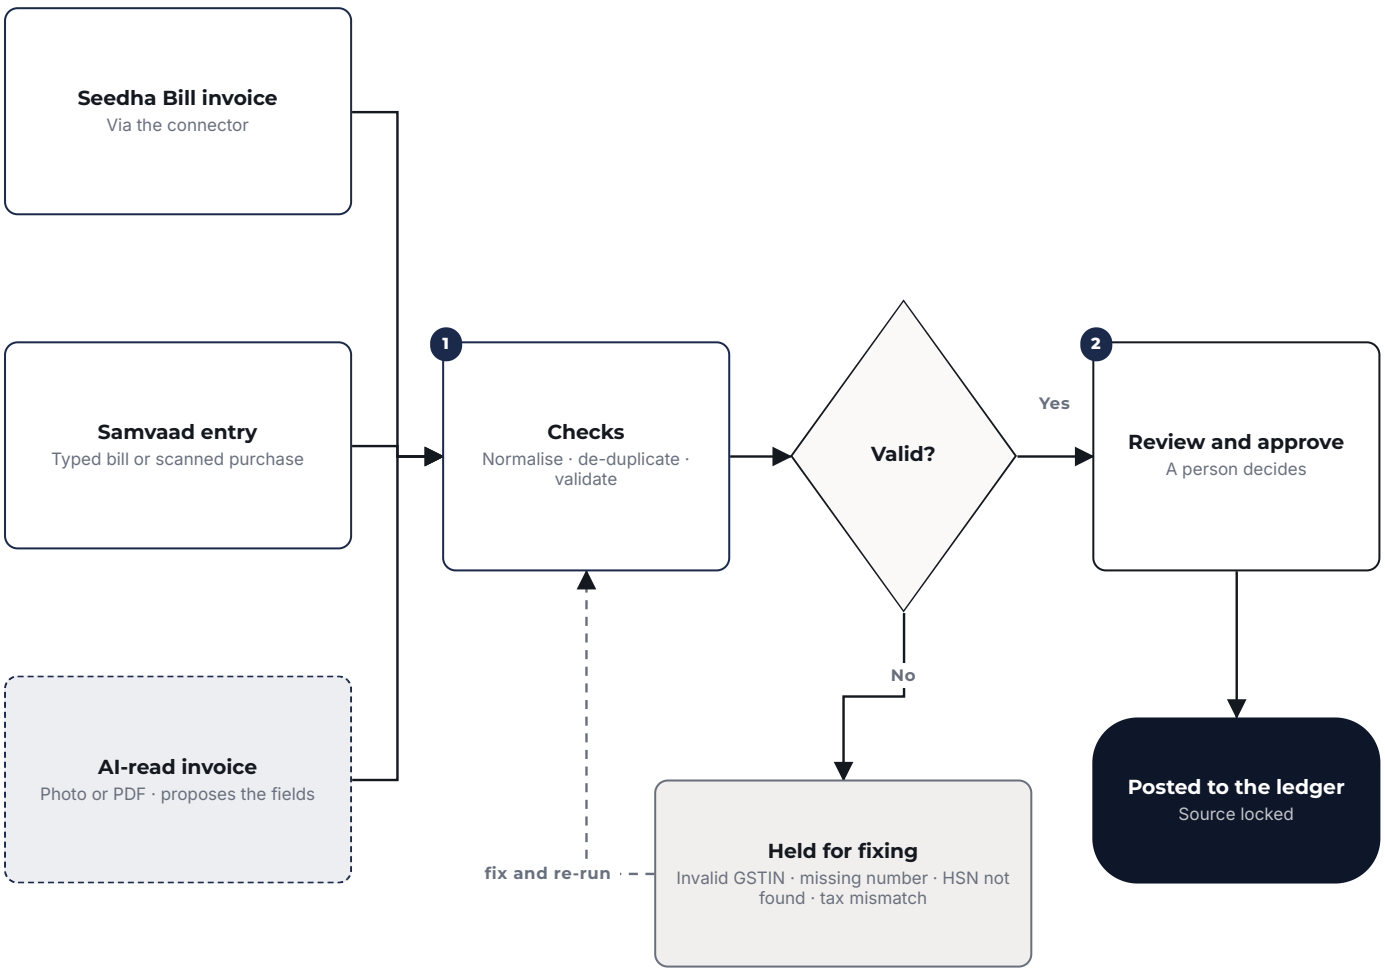

When the payment arrives: debit Bank ₹11,800, credit Accounts receivable ₹11,800.

Sources · Lekhya "How Lekhya works" flow (Invoice → Ledger → P&L) and Getting Started help.

FUNCTIONAL FLOWCHART

Every document enters through a door a person controls

Three sources feed the same checks and the same approval step. Anything invalid is held back, not posted.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Steps that are links jump to the capability behind them.

Same Prabhas account

One toggle in Lekhya's Connector settings links Seedha Bill.

A client's Seedha Bill

A connection code, issued and revoked from Lekhya's Connector page, links the two accounts.

AI never posts

AI-read fields are proposals. Nothing reaches the ledger until a person posts.

Sources · Lekhya flow pages and Seedha Bill connector guide; Lekhya Features page (AI Tools); Samvaad README.

IN DAILY USE

Lekhya AI for accountants, freelancers and CAs

Lekhya is written for the person who keeps the books. A CA practice has its own edition, Lekhya Pramaan, covered in its own catalogue.

Accountants

●●●● Built for

Lekhya Standard serves businesses doing their own accounts, and the same ledger serves the accountant who keeps their books.

1. **Set up the company**
   Enter the trade name, GSTIN (needed for GST filing), state, business type and fiscal year. A standard chart of accounts is already there.
2. **Bring the data in**
   Import from Tally by XML, connect Seedha Bill, or take Samvaad entries from the approval queue. Customers and vendors carry over from Seedha Bill.
3. **Review, approve, post**
   Work the review queue. Invalid invoices are held back. AI-read fields are proposals you verify.
4. **Close the period**
   Reconcile the bank statement, prepare GSTR-1 and GSTR-3B, reconcile GSTR-2B, and export P&L, balance sheet and trial balance.

Freelancers

●●●○ Works well

Lekhya's own pages say "from solo consultants to CA firms". If you only need invoices, Seedha Bill alone is enough; Lekhya adds real books and a place for your accountant to work.

1. **Raise invoices in Seedha Bill**
   Keep invoicing simple. Connect it to Lekhya when you want books.
2. **Let the ledger follow**
   Approved invoices post as sales with GST output. Razorpay-captured payments post as receipts.
3. **Hand your accountant a clean set**
   Invite your accountant with the Accountant role, or give them read access as a Viewer.

Chartered Accountants

●●●○ Works well

Lekhya keeps a client's books. For the practice itself (UDIN register, audit forms, DSC tracking, compliance calendar, many clients under one login) use Lekhya Pramaan.

1. **Keep clients' books**
   Use roles and the immutable audit trail so every change is attributable.
2. **Move to Pramaan for the practice**
   Pramaan is the CA edition, available to practising CAs with an ICAI membership number.
3. **Keep the AI on a leash**
   AI proposals never post themselves. Your review remains the control.

PLANS & GETTING STARTED

ERP Lite, ERP Pro or Lifetime

Choose a month, a year or a lifetime. There is no auto-renewal, so there is nothing to cancel.

ERP Lite

₹499 /month · ₹4,990/year + 18% GST

1 user seat · 1 company · **150** AI actions/month · double-entry journals and GST reports · sales and purchase invoices · bank reconciliation · Tally import and PDF export

ERP Pro MOST CHOSEN

₹1,299 /month · ₹12,990/year + 18% GST

5 user seats · 1 company · **750** AI and **500** GST API actions/month · everything in Lite · AI OCR invoice extraction · Seedha Bill live connector · GST e-filing, e-invoice and e-way bill

ERP Lifetime

₹24,999 one-time + 18% GST

10 user seats · 3 companies · **750** AI and **500** GST API actions/month · all ERP Pro features · all future ERP updates · priority support for the life of the plan

Plans side by side

	ERP LITE	ERP PRO	ERP LIFETIME
Price (before GST)	₹499/mo · ₹4,990/yr	₹1,299/mo · ₹12,990/yr	₹24,999 one-time
User seats · companies	1 · 1	5 · 1	10 · 3
AI actions per month	150	750	750
GST API actions per month	—	500	500
Double-entry, GST reports, invoices, bank reconciliation, Tally import	Yes	Yes	Yes
AI OCR invoice extraction	—	Yes	Yes
Seedha Bill live connector	—	Yes	Yes
GST e-filing, e-invoice, e-way bill	—	Yes	Yes
Future ERP updates and priority support	—	—	Yes

— means not listed for that plan on the pricing page.

Getting started

1. **Create your account**
   Go to lekhya.prabhassaas.in and sign up with Google or email. One Prabhas account works across the suite.
2. **Set up your company**
   Add your trade name, GSTIN, state and fiscal year. The GSTIN is needed for GST filing.
3. **Add customers and vendors**
   Add parties by hand, or let them carry over from Seedha Bill.
4. **Post your first invoice**
   Pick the customer, add items, save a draft or post to the ledger.

Price basis, stated plainly

- Extra AI actions: ₹149 for 500, prepaid, never billed later. Annual billing gets 2 months free.
- Prices on the pricing page **exclude GST**. 18% GST is added at checkout.
- Every plan starts with a **14-day free trial**, no card needed.
- Every plan includes a monthly allowance of AI and GST API actions.
- Samvaad on Android is free with Lekhya ERP and Pramaan. Pramaan (CA edition) is priced separately.

Source · prabhassaas.in/pricing (Lekhya AI section), read 22 Oct 2026. Prices change: the pricing page is the current record.

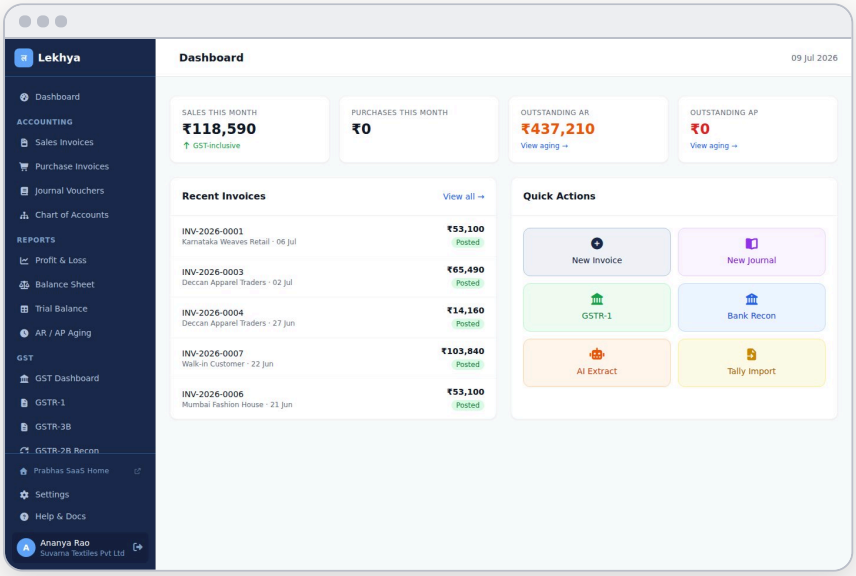

IN THE APP

GST-compliant, double-entry books that update themselves.

An accounting ERP for Indian businesses, accountants and CAs. Invoices from Seedha Bill and entries from Samvaad arrive in a review queue; a person approves them; the ledger, GST reports and bank reconciliation follow.

DOUBLE-ENTRY · GST RETURNS · AI PROPOSES, YOU APPROVE · TALLY IMPORT

CONNECTIONS

How Lekhya takes data in

One review queue for every source, so nothing reaches the ledger without a person approving it.

1 **Normalise** → 2 **De-duplicate** → 3 **Validate** → 4 **Quarantine or review** → 5 **A person approves** → 6 **Journal posts**

LIVE TODAY

What comes in now

- **Seedha Bill invoices** via the connector, never imported twice.
- **Samvaad entries,** drafted from a message and checked by you before sending.
- **AI-read invoice photos,** proposed and accepted by a person.
- **Tally imports.**

How a document is treated

- **Nothing posts itself:** every item waits for a person.
- **Duplicates are refused,** so the same invoice is never imported twice.
- **Doubtful items are parked** in quarantine rather than guessed at.

Why a review queue

Every source takes the same route into the books. It produces a proposal; Lekhya normalises it, rejects duplicates, validates it against the chart of accounts, parks anything doubtful in quarantine and waits for a person. Posted entries are immutable and corrected by reversal, so a connector can never quietly rewrite history.

What stays true

- The AI proposes; **a person approves.**
- The source document is **locked** after posting.
- Each company's data is separate: **multi-company scoping** applies to every connector.

Status

The review queue and the four sources above are **live** as described in this section's capability pages.

Questions about connecting your data?

Tell us what you run today and how your data reaches your books. We will say plainly whether a need is covered, depends on something else, or is out of scope.

WHAT'S NEXT

Lekhya AI: improvements anticipated

Only items that are written down in the product's own documents. None is dated.

PROPOSED

Server-side enforcement of the registration and GSTIN rule

The rules are live in the sign-up form. Enforcing them on the server, so they hold however an account is created, is written up and not yet applied.

Source: BrandKit guidelines/REGISTRATION_STANDARD.md

Lekhya AI: reading this page

No separate Lekhya roadmap is published in the product repository. Items are added here only when the owner approves them.

What the labels mean

- **Proposed / Planned / Planning**: written down; not built; no date.
- **Needs owner decision / Awaiting decisions**: blocked on a choice that is not ours to make alone.
- **Built, awaiting keys**: the code exists; it is not live until the provider credentials are in place.
- **Deferred / Not being built**: considered and set aside on purpose.

What this page is not

A promise, a delivery schedule or a feature you can buy today. Items come from each product's own repository documents; where none exist, the page says so rather than inventing a roadmap.

Tell us what would help you most

Order is shaped by what customers need and by what can be built and checked properly. If something here matters to you, or something missing does, say so before you decide.

enquiry@prabhassaas.in · WhatsApp **+91 70215 03895**

TRUTH SHEET

What is confirmed, what depends, what is not included

Read this page before you decide. It separates what Lekhya does today from what depends on a provider or a plan.

Confirmed in the product

- Double-entry journals that reject unbalanced entries; posted journals are immutable
- GST invoices with CGST/SGST or IGST, HSN/SAC master, GSTIN validation
- Profit and loss, balance sheet, trial balance and registers with PDF export
- Tally import (upload, preview, run) and bank reconciliation from a CSV statement
- Roles, immutable audit trail and per-company isolation
- AI that proposes only; a person approves every posting

Needs something else to work

- E-invoice, e-way bill and return filing run through a GST service provider you connect
- AI OCR invoice extraction and the Seedha Bill live connector are on ERP Pro
- AI and GST API actions are metered per plan
- The Samvaad scan flow needs Samvaad, an Android app

Not included

- CA practice tools (UDIN register, audit forms 3CD/3CB, DSC register, compliance calendar, multi-client portfolio): those are Lekhya Pramaan
- Tax or legal advice: Lekhya prepares, you and your professional decide
- A guarantee that AI-read figures are correct: every one is a proposal

Verify before you rely on it

- Which GST service provider is live for your account before you depend on e-invoicing or filing
- Where AI processing runs for your plan: Lekhya supports local and cloud AI providers, so ask which applies to you
- Whether your turnover requires e-invoicing or e-way bills

Questions worth asking us before you buy

- Which GSP do you support for my state and volume?
- Can you migrate my Tally data, and how far back?
- Do I need Lekhya ERP or Pramaan if I serve several clients?
