Samvaad

MESSAGE TO INVOICE

Type a bill. Get a GST invoice.

Tell Samvaad a sale the way you would tell your accountant, or photograph a supplier's bill. Either becomes a draft that waits for a person to approve it, in Lekhya or Seedha Bill.

NOT A MESSENGER
No person-to-person chat. "Messaging" is the input method.

Who Samvaad is for

An honest fit check for the three professions this catalogue covers. "Not designed for" is a real answer: it saves you a trial.

Accountants	●●●● **Built for**	Supplier bills arrive as photographs; Samvaad turns them into purchase drafts waiting in the Lekhya approval queue, so you review instead of key in.
Freelancers	●●●○ **Works well**	Type the sale as you would tell an accountant; Samvaad drafts the invoice. It needs a Lekhya or Seedha Bill entitlement and is an early Android release.
Chartered Accountants	●●●○ **Works well**	Samvaad is included with Lekhya Pramaan, so clients' captured bills can reach the books you review.

How to use this PDF · every contents line, flowchart step and cross-reference is a link. The bookmarks panel of your PDF reader lists every page.

OVERVIEW

A chat-shaped screen that does accounts

Samvaad is an input method, not a messenger. You talk to a screen that looks like a chat; what comes out is a sales invoice draft or a purchase entry.

Type **#bill 4 chairs @2000 to Ravi** and Samvaad parses it into an invoice draft, **checks the tax breakdown with you**, and sends it on. Parsing uses rules and a catalogue lookup first, with a language-model fallback for what rules cannot read.

Photograph a supplier's bill, up to eight pages of one purchase bill, and it becomes a purchase entry. The pages are validated, stored privately, read by AI, cross-checked against GST and totals, and shown to you before anything is sent. Everything lands in **Lekhya's approval queue** (or a **Seedha Bill** inbox) for a person to approve.

In one line

Say it or snap it; a person approves it; the books follow.

BEST FIT

- Owners and staff who capture sales and purchase bills on a phone
- Accountants who want bills arriving ready to approve
- Teams already on Lekhya, Pramaan or Seedha Bill

The six things it does

01
Type a sale
#bill in plain words becomes a GST invoice draft you check before sending.

02
Scan a purchase bill
Up to eight camera or gallery pages of one bill, read by AI into a reviewable draft.

03
Forms and catalogue
Structured invoice forms and catalogue lookup for when typing is not enough.

04
Works offline
An offline outbox holds entries until the network is back.

05
Right destination
Company sales and purchases go to that company's Lekhya books.

06
A person approves
Confirmed drafts wait in Lekhya's import queue. Nothing posts itself.

Where it sits in the Prabhas SaaS suite

Samvaad captures. Its drafts land in Lekhya (the books) or Seedha Bill (invoice issuing).

REVIEW
Lekhya Pramaan

Sources · Samvaad README and current-implementation page; prabhassaas.in app registry.

CAPABILITIES

Capturing entries

Four ways to get a sale or a purchase into the system without re-typing it.

01 **Type a bill with #bill**

"#bill 4 chairs @2000 to Ravi" becomes a sales invoice draft. Rules and catalogue lookup run first; a text-model fallback handles the rest. If the model fails, you get a reviewable or refused result, **never invented figures**.

02 **Multi-page bill scan**

Capture up to **eight pages** of one purchase bill from the camera or gallery. Pages are validated, stored privately and read by server-side AI vision. GST, printed totals and company are cross-checked, and **you review before it is sent**.

LIVE MODULE

03 **Structured forms and catalogue lookup**

Prefer fields to typing? Submit reviewed sales or purchases through the invoice form, with catalogue lookup.

04 **Offline outbox and history**

Entries made without a connection wait in an offline outbox. Conversation history and company switching are in the app.

05 **Duplicate protection**

Exact-image and business-key checks run before a duplicate can be filed. Retries reuse the same capture instead of making a second one.

Typing commands

What the input box understands today.

YOU TYPE	WHAT HAPPENS
#bill …	Parses a typed sale into an invoice draft for you to check
#scan	Sends you to the camera or gallery bill-scan workflow
#fix	Not available yet: message edit and delete is a separate capability

Automatic document-edge detection and cropping are not part of the live bill-scan module.

Sources · Samvaad README (current implementation); docs/CURRENT_IMPLEMENTATION.md; prabhassaas.in app registry.

CAPABILITIES

Routing and approval

A draft is a request, not a posting. The destination rules are decided by the server, not the phone.

01 **Company sales go to that company’s Lekhya books**
For a selected company, sales go to its Lekhya books. Purchases **require Lekhya**.

02 **Personal sales follow your entitlement**
A personal sale goes to the destination you are entitled to and prefer. With no preference, Lekhya wins when both products are available.

03 **Lekhya approval queue**
Confirmed Lekhya drafts wait in Lekhya’s import approval queue, where a person approves posting.

04 **Seedha Bill inbox**
Sales confirmed for Seedha Bill arrive in its Samvaad tab. Review one, open it, then issue it through the normal invoice flow.

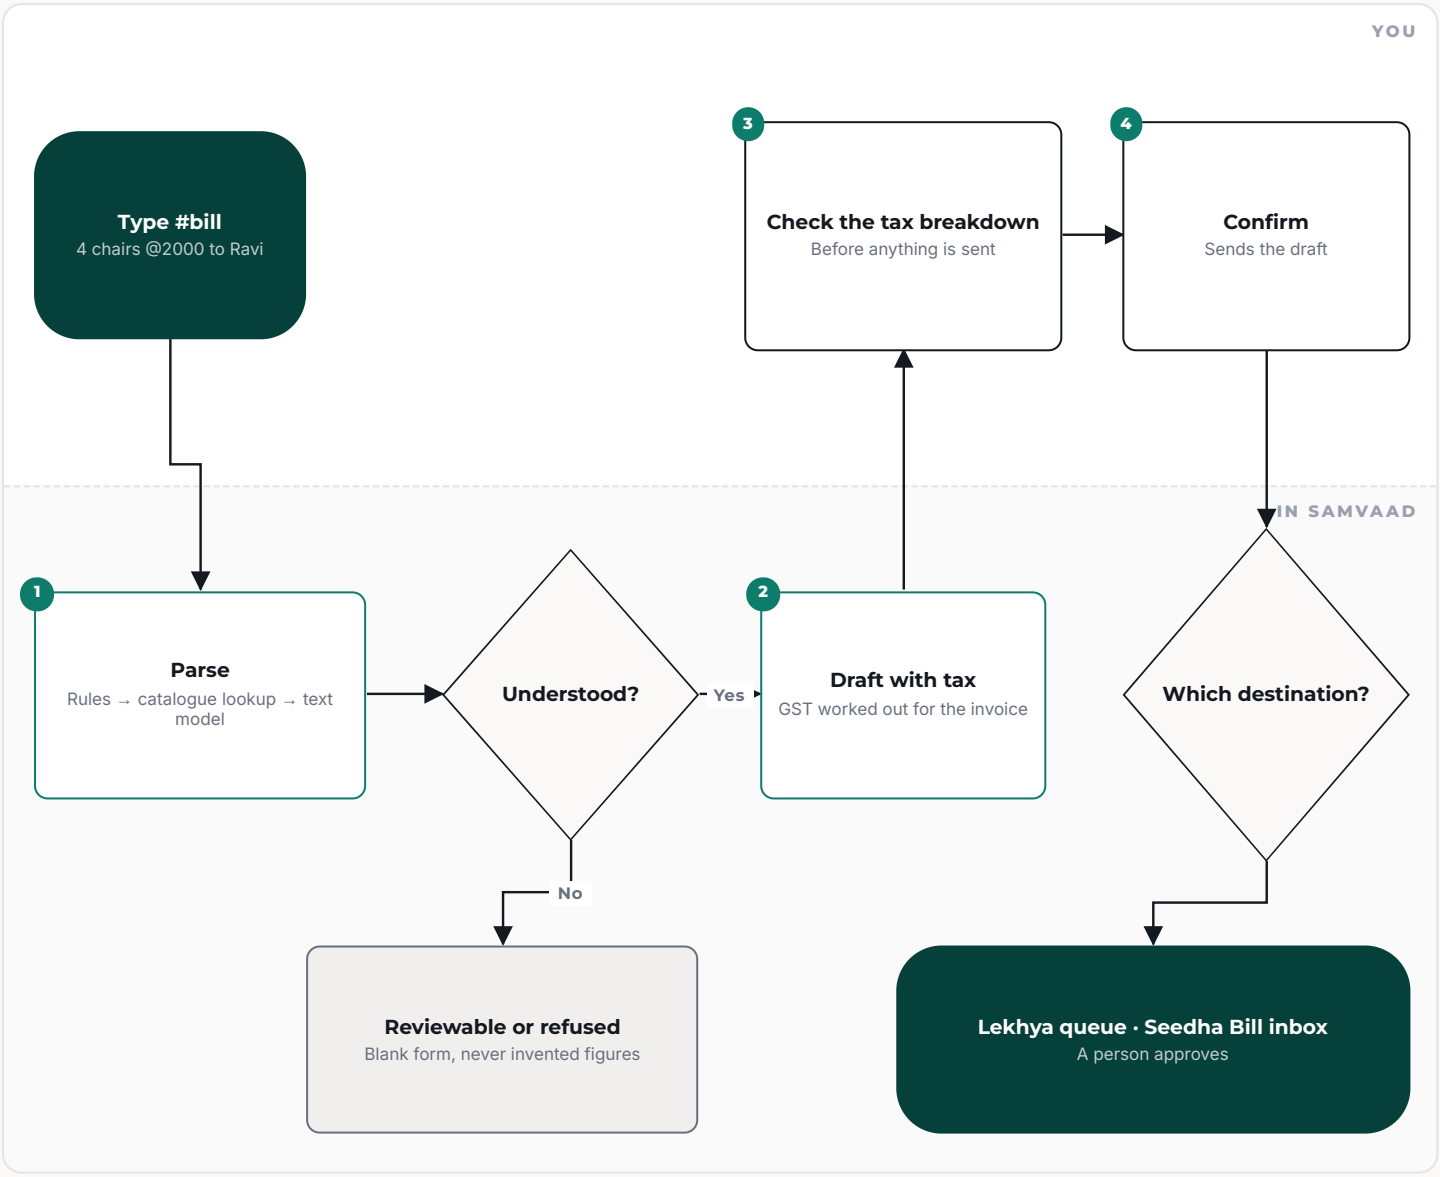

05 **One backend, no second credential**
The app talks to one backend and never to Seedha Bill or Lekhya directly. Provider keys live on the server, never in the app.

Sources · Samvaad README and docs/CURRENT_IMPLEMENTATION.md; Seedha Bill app (Samvaad tab); Lekhya connector pages.

FUNCTIONAL FLOWCHART

From a typed bill to an approved draft

Every step before the last is a draft. A confirmation is not proof that an invoice was issued or a journal posted.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Steps that are links jump to the capability behind them.

Company sales

Go to that company's Lekhya books.

Personal sales

Go to your entitled destination; Lekhya wins when both are available.

A confirmation is a request

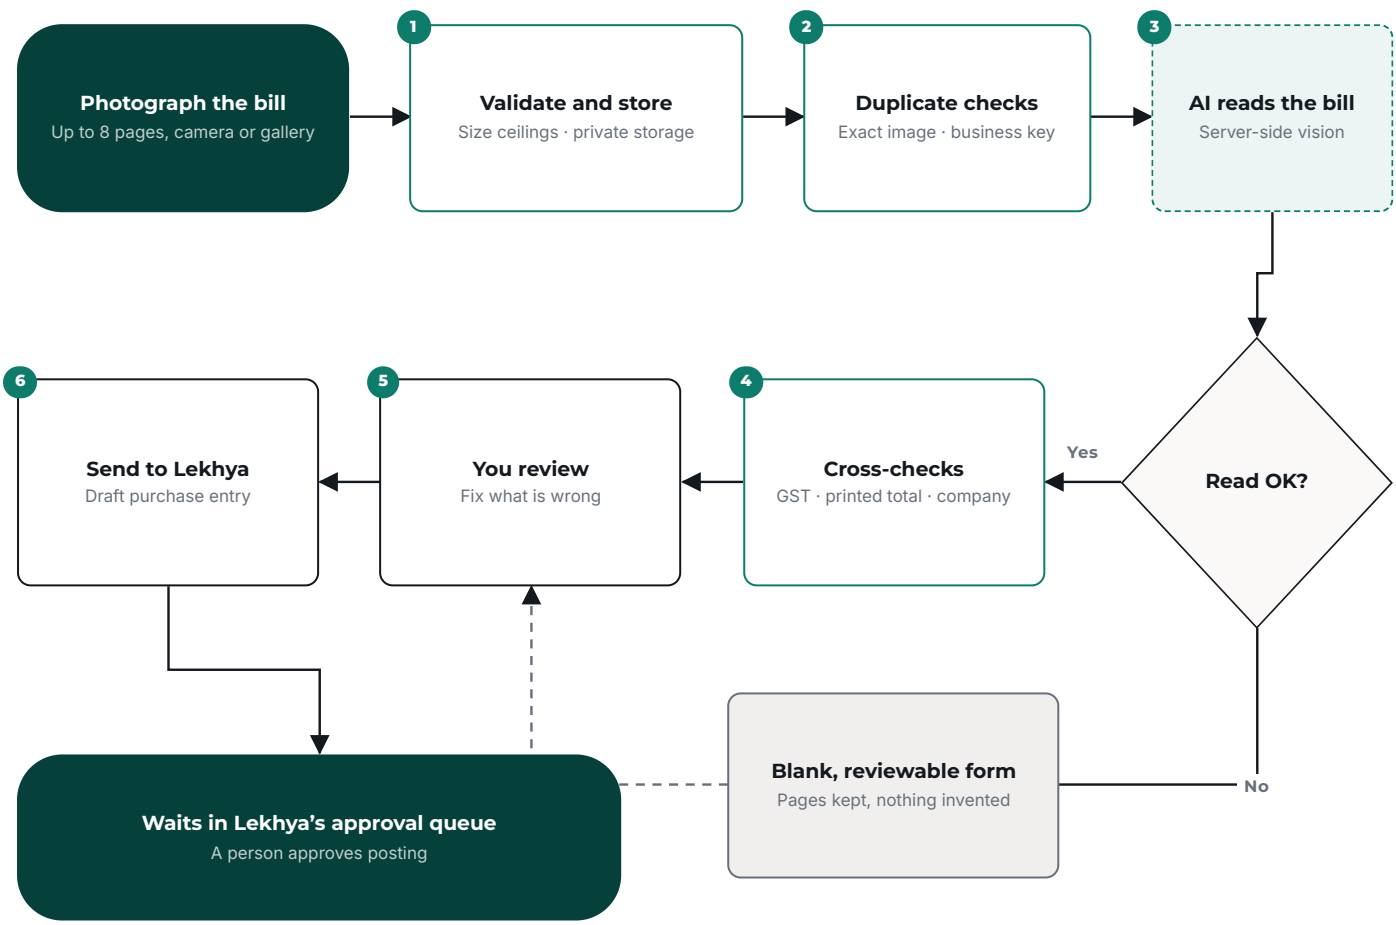

Posting needs a person in Lekhya, or invoice issue in Seedha Bill.

Sources · Samvaad README and docs/CURRENT_IMPLEMENTATION.md; Seedha Bill app (Samvaad tab); Lekhya connector pages.

FUNCTIONAL FLOWCHART

From a supplier’s bill to a purchase entry

A failed AI read never loses your pages and never invents data: it falls back to a blank, reviewable form.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Steps that are links jump to the capability behind them.

What “live” means here

Camera or gallery capture and review. Automatic edge detection and cropping are not part of it.

Purchases need Lekhya

A purchase entry has no other destination.

AI proposes

Every extracted figure is shown to you before it is sent.

Sources · Samvaad docs/CURRENT_IMPLEMENTATION.md (Multi-page Bill Scan); Samvaad README.

IN DAILY USE

Samvaad for accountants, freelancers and CAs

Samvaad serves whoever captures the paperwork on a phone. Its drafts are always checked by a person before they count.

Accountants

●●●● Built for

Supplier bills arrive as photographs; Samvaad turns them into purchase drafts waiting in the Lekhya approval queue, so you review instead of key in.

1. **Capture at source**
   The owner or staff photograph each supplier bill, up to eight pages.
2. **Review the draft**
   GST, printed total and company are cross-checked and shown. Fix what is wrong.
3. **Approve in Lekhya**
   Drafts wait in the import approval queue. Posting is your decision.

Freelancers

●●●○ Works well

Type the sale as you would tell an accountant; Samvaad drafts the invoice. It needs a Lekhya or Seedha Bill entitlement and is an early Android release.

1. **Type #bill**
   “#bill 4 chairs @2000 to Ravi” becomes an invoice draft with tax worked out.
2. **Check and confirm**
   Look at the tax breakdown first. Nothing is sent until you confirm.
3. **Issue it**
   Open the draft in Seedha Bill’s Samvaad tab and issue it through the normal invoice flow.

Chartered Accountants

●●●○ Works well

Samvaad is included with Lekhya Pramaan, so clients’ captured bills can reach the books you review.

1. **Include it in the engagement**
   Samvaad is free with Pramaan on Android.
2. **Switch the acting company**
   The app supports company switching, and the server validates company membership and entitlements.
3. **Keep your review as the control**
   A confirmed draft is not a posting. Lekhya’s queue is where you decide.

Sources · Samvaad README and docs; prabhassaas.in app registry (“free with Lekhya ERP and Pramaan”); Seedha Bill app; Lekhya connector pages.

PLANS & GETTING STARTED

Free with Lekhya ERP and Pramaan

Samvaad has no price of its own. It comes with Lekhya ERP and Lekhya Pramaan, on Android.

With Lekhya ERP MOST CHOSEN

Included

Android app, v0.1.0 · multi-page bill scan · #bill · offline outbox

With Lekhya Pramaan

Included

Same app and features, for practising CAs

What is still to come

From the build notes (4 Oct 2026). These are not part of the commercial promise today.

Local storage isolation
Account, company and destination isolation in the app's local storage.

Corrections
The full correction lifecycle (#fix, edit and delete) and learning from confirmed corrections.

Status push
Push notifications about a draft's status.

Getting started

1. **Have a Lekhya or Seedha Bill account**
   Samvaad uses your Prabhas SaaS login and checks what you are entitled to.
2. **Install the Android app**
   The Google Play listing is coming soon; ask us for the current Android build.
3. **Pick the company**
   Choose the company you are acting for, so drafts go to the right books.
4. **Type #bill, or scan a purchase bill**
   Check the draft and confirm. A person then approves it.

Price basis, stated plainly

- The Google Play listing is coming soon. iOS is kept compiling but not shipped.
- Samvaad is **free with Lekhya ERP and Pramaan**. Those plans' prices are on the pricing page and exclude GST.
- A plan with Lekhya starts with a **14-day free trial**.
- Attributing AI usage to accounts is still being hardened, so allowances for scanning may change.
- Version **0.1.0**: an early release.

Source · prabhassaas.in app registry (Samvaad) and pricing; Samvaad README, read 22 Oct 2026. Prices change: the pricing page is the current record.

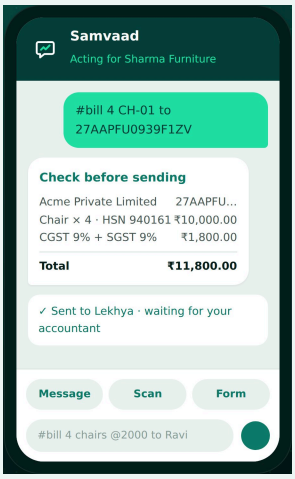

IN THE APP

Type a bill. Get a GST invoice.

Tell Samvaad a sale the way you would tell your accountant, or photograph a supplier's bill. Either becomes a draft that waits for a person to approve it, in Lekhya or Seedha Bill.

#BILL IN PLAIN WORDS · MULTI-PAGE BILL SCAN · OFFLINE OUTBOX · ANDROID

Type a bill as a message; Samvaad shows "Check before sending" and sends it to Lekhya for your accountant

About these screens · Sample data. Screens are shown as supplied to the BrandKit; the product changes, so the app itself is the record.

WHAT'S NEXT

Samvaad: improvements anticipated

Only items that are written down in the product's own documents. None is dated.

PLANNED, LATER

iOS app

Samvaad ships on Android first. The code stays portable and iOS is kept compiling, so adding it later is an implementation, not a redesign.

Source: Samvaad DECISIONS.md, D-026

DEFERRED

Web version

Deferred when version 1 was narrowed to a private Android invoice-capture app.

Source: Samvaad DECISIONS.md, D-017

DEFERRED

GST-law and circular Q&A

Deferred past version 1 because it amounts to tax advice and needs separate treatment.

Source: Samvaad DECISIONS.md

NOT BEING BUILT

A public messenger

The full messenger design is archived and is not to be built from. Samvaad stays an invoice-capture app with no person-to-person chat.

Source: Samvaad DECISIONS.md, D-017

Samvaad: reading this page

Samvaad is an early Android release (v0.1.0). Nothing on this page is dated or promised.

What the labels mean

- **Proposed / Planned / Planning**: written down; not built; no date.
- **Needs owner decision / Awaiting decisions**: blocked on a choice that is not ours to make alone.
- **Built, awaiting keys**: the code exists; it is not live until the provider credentials are in place.
- **Deferred / Not being built**: considered and set aside on purpose.

What this page is not

A promise, a delivery schedule or a feature you can buy today. Items come from each product's own repository documents; where none exist, the page says so rather than inventing a roadmap.

Tell us what would help you most: enquiry@prabhassaas.in · WhatsApp +91 70215 03895.

TRUTH SHEET

What is confirmed, what depends, what is not included

Samvaad is an early release. This page says what is live, what depends on other apps and what is deliberately missing.

Confirmed in the product

- #bill parsing, structured forms, catalogue lookup, company switching and offline outbox
- Multi-page bill scan: up to eight pages, validated, stored privately, read by server-side AI vision and cross-checked
- Routing: company sales to that company's Lekhya books; purchases to Lekhya
- Provider keys stay on the server, not in the app

Needs something else to work

- Purchases and company sales need Lekhya
- Seedha Bill drafts need Seedha Bill to issue them
- An Android phone; iOS is not shipped
- The Samvaad Android build you are given: the Play listing is coming soon

Not included

- Person-to-person chat: Samvaad is not a messenger
- Automatic document-edge detection and perspective cropping
- #fix and message edit/delete
- Status push notifications

Verify before you rely on it

- A confirmation is not proof that an invoice was issued or a journal posted: check Lekhya or Seedha Bill
- The Android builds are early (v0.1.0). Check which build you are on
- AI read quality on your own bills: try real ones during the trial
- AI usage and billing attribution: still being hardened in this release

Questions worth asking us before you buy

- Which Android build should I install today?
- Can you walk me through a bill scan on my own supplier bills?
- Which destination will my company's drafts use?
